Study on the problems and causes of township coal mining based on the concept of sustainable development

Jiang Wei, Zhang Jingdong, Pan Mengcheng, Li gang, Ma Hongzhou.
Zhongnan University of Economics and Law, China

The 13th five-year Plan advocates the sustainable development of environment and resources, but the township coal mines, as an important part of the national coal resources, have become a great obstacle to the scientific development of the coal industry.

On the basis of a comprehensive analysis of the present situation of China’s township coal mines, this paper sums up the main problems existing in the aspects of industry development, environmental protection, and safety, and deeply analyzes the causes of their emergence, and then studies the feasible countermeasures. In order to provide reference and basis for the planning and management of township coal mines.
